Happy Holidays

US Swine Health Improvement Plan (US SHIP)

Visit our website to learn more about US SHIP a producer-driven national program that establishes consistent health standards that serve as a platform for control of foreign animal diseases (FAD) of high consequence like African swine fever (ASF) and classical swine fever (CSF). It also has benefits for the control of endemic diseases.

RFID (Radio Frequency Identification Device) Tags available for veterinarians at no cost!

The USDA is continuing to provide states with official white "840" button tags and orange "840" calfhood vaccination (OCV) button tags.

A Premises ID will be required to order these tags. If the clinic does not have a Premises ID, they will need to complete a Premises Application which can be found on our website:

Biosecurity Basics

One of the best ways to protect your animals, including both pets and livestock, is to practice good biosecurity. Biosecurity refers to the steps taken to prevent the introduction and/or spread of disease (including viruses, bacteria, etc.) to animals and people. These measures include taking steps to reduce the risk of an infectious or zoonotic disease being brought onto your property as well as leaving your property in the case of an outbreak. Here are 5 general steps producers can follow to help ensure good biosecurity:
