

SHARING NEEDLES CAN SPREAD EQUINE INFECTIOUS ANEMIA

➤ If a needle is shared between horses it can spread disease, which may lead to illnesses or fatalities.

ALWAYS

USE ONLY A NEW, STERILE NEEDLE AND SYRINGE FOR ALL INJECTIONS, WHETHER INTO A VEIN OR MUSCLE

HAVE ANY HORSE THAT WILL SERVE AS A BLOOD DONOR TESTED FOR EQUINE INFECTIOUS ANEMIA

NEVER

REUSE NEEDLES OR SYRINGES BETWEEN HORSES, EVEN IF YOU OWN BOTH HORSES AND THEY APPEAR HEALTHY

INSERT A USED NEEDLE INTO A DRUG OR VACCINE MULTIDOSE BOTTLE

GIVE THE BLOOD FROM ONE HORSE TO ANOTHER HORSE WITHOUT THE SUPERVISION OF A VETERINARIAN AND KNOWING THE DISEASE STATUS FOR BOTH HORSES
