

Medical Treatment Record Key

- A. Date Treated:** Record the date of each treatment administered to the animal.
- B. Animal ID:** Record animal identification (e.g. ear tag, back tag, button number, permanent ID, name).
- C. Diagnosis:** Record reason for treating animal and follow label use directions (e.g. foot rot, pneumonia).
- D. Weight of Animal:** Record approximate weight of animal to be treated following label use directions.
- E. Product(s) Used:** Record the trade name of product administered to the animal.
- F. Dosage Used:** Record the amount of drug administered to the animal (cc's/ml).
- G. Route of Administration:** Record how the drug was given to the animal (e.g. IV, IM, SQ).
- H. Location of Administration:** Record specifically where the drug was administered into the animal to be treated (e.g. lower ear, neck, shoulder).
- I. Withdrawal Period & Date:** Record the withdrawal period, if any, according to label use of drug and calculate the date from last treatment.
- J. Person Treating Animal:** Record the person (e.g. veterinarian, hired help) responsible for treating the animal (e.g. JS, John Smith, Smith).
- K. Outcome of Treatment:** Record the final disposition of the animal treated (e.g. returned to herd, remained in treatment pen, culled, sale barn, direct to harvest, died).
- L. Good to Go!:** Review all treatment/feeding records and protocols to assure the treated animal is clear of all withdrawal periods and is "Good to Go!"
